Women who have been tested for HIV	39.4	29.1	25.1	31.8

All values are percentages and relate to women 15-49 years of age unless otherwise indicated.

The Guyana Multiple Indicator Cluster Survey (MICS) was conducted in 2006 by the Bureau of Statistics to monitor the situation of children and women at the national and sub-national level. The primary objectives are to provide up-to-date information for assessing the situation of children and women; to furnish data needed for monitoring progress toward the Millennium Development Goals, the goals of A World Fit For Children (WFFC), and other internationally agreed upon goals; to contribute to the improvement of data and monitoring systems in Guyana and to strengthen technical expertise in the design, implementation, and analysis of such systems.
